

# OUR AMAZING BODY

We blink about 25 times in a minute.

The final height of adults is about twice their height on their fifth birthday.

Our brain can store, recognize and remember more than 10,000 different smells

The brain does not feel any pain even if it is cut.

A sneeze can travel at a speed of more than 150 kilometers per hour.

Our right foot is slightly longer than our left.

Our nose and ears grow throughout our life. Our eyes, however, are of the same size from birth.
